

The image shows two offshore wind turbines on a calm sea at sunset. The sky is a mix of orange, red, and purple, with the sun low on the horizon. The water is dark with some reflections. The turbines are silhouetted against the bright sky.

AB 1373: CENTRAL PROCUREMENT OF DIVERSE NEW CLEAN ENERGY SOURCES

California needs a new source of 100% clean power to build its way out of the climate crisis – offshore wind is the answer.

With some of the best offshore wind availability in the nation, California is leading with ambitious goals to harness this resource: up to 5 GW by 2030 and a nation-leading 25 GW by 2045. That's enough to power the state, equal to 12 Hoover Dams or a dozen Diablo Canyon power plants!

Central procurement is critical to getting this promising new market on its feet – and delivering clean power to every Californian.
